Assignment 4

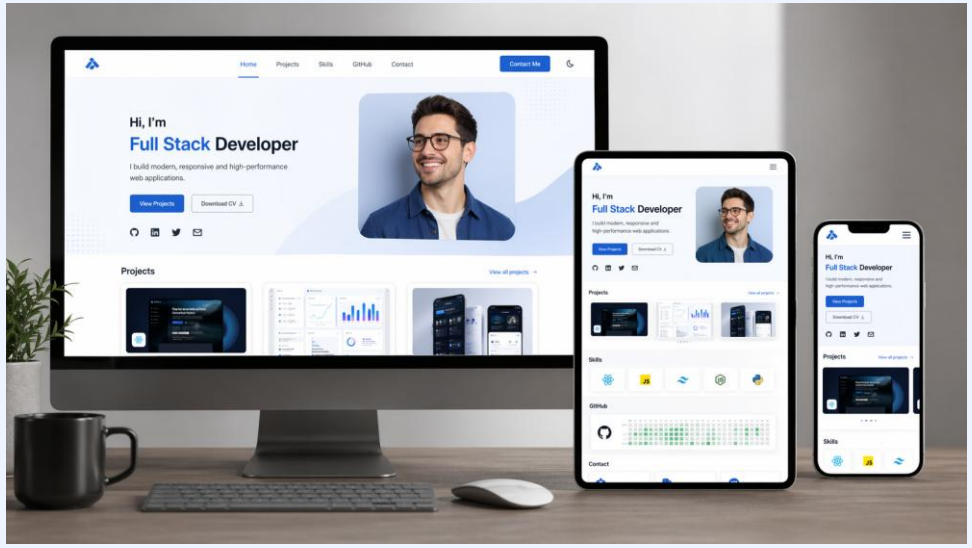
Personal Web Application

Final portfolio website presentation

Danah Alalwan
Student ID: 202251380

Responsive portfolio | GitHub API | AI-assisted workflow

Clean design • interactivity • documentation • presentation

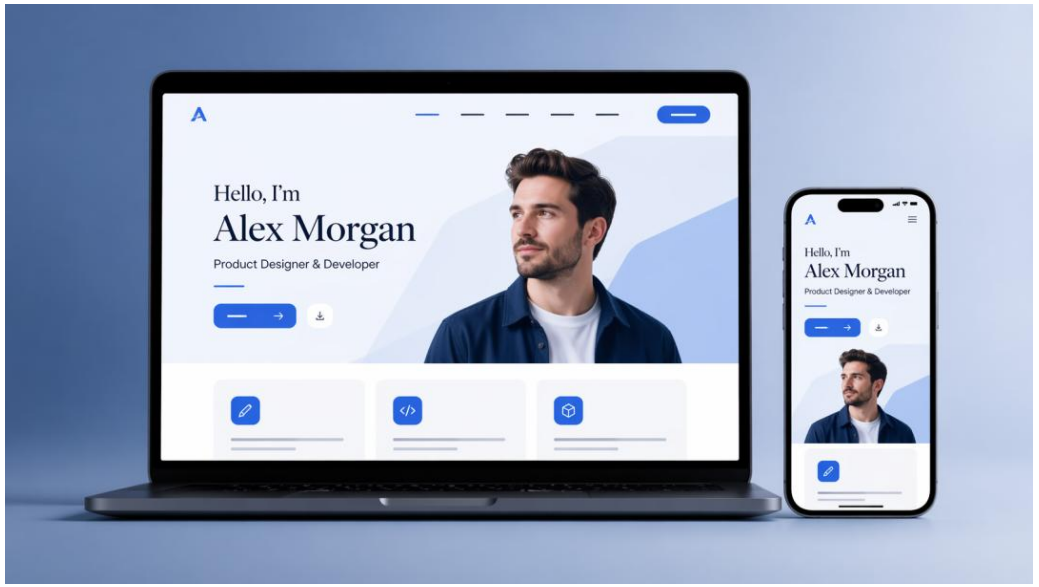


Project overview and motivation

Introduction

The goal was to transform earlier phases into a complete personal web application that feels polished, professional, and presentation-ready.

- Show my profile, skills, projects, and contact details in one place
-
- Demonstrate course concepts: HTML, CSS, JavaScript, APIs, validation, and localStorage
-
- Deliver a final product that is responsive, documented, and easy to present



Why this project matters

It combines technical skills with personal branding, which makes the website useful beyond the course itself.

Technical demonstration: key features

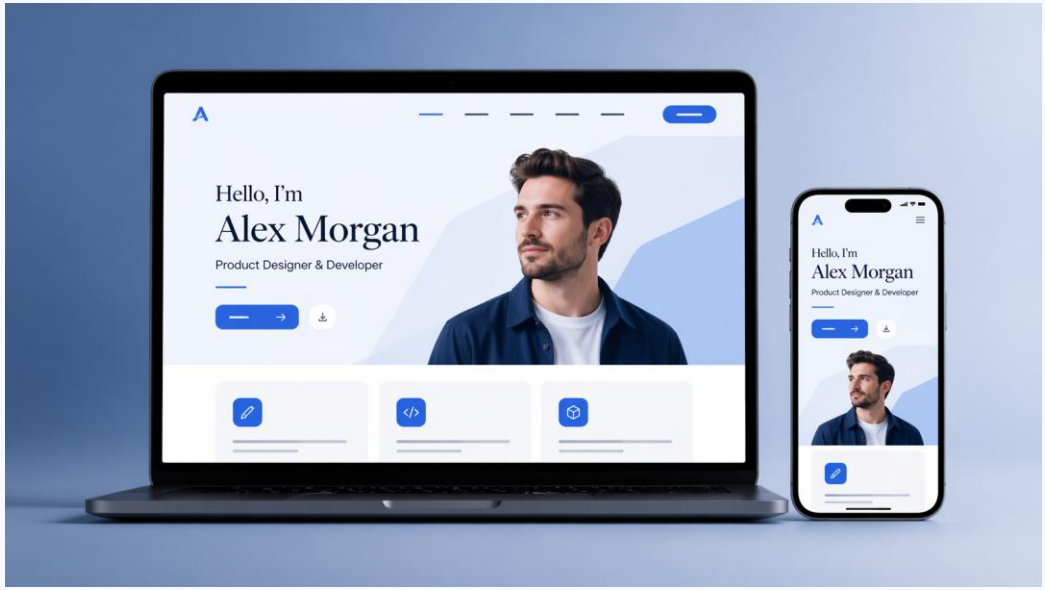
Live demo focus

01 **Responsive layout** Works across desktop, tablet, and mobile screens.

02 **Interactive projects** Search, filter, sort, and open project details.

03 **Dynamic content** GitHub repositories are fetched with the GitHub API.

04 **Personalized UX** Theme preference and visitor name are saved locally.



Demo sequence: home page → projects section → GitHub repos → greeting storage → contact validation

Technical architecture overview

How the application works

HTML
Structure and sections

CSS
Responsive styling and themes

Browser
DOM updates and user actions

GitHub API
Public repository data

JavaScript
Interactivity and logic

localStorage
Theme + visitor name

Additional browser-side logic includes project filtering, sorting, search, a modal window, and form validation.

AI integration, challenges, and lessons learned

Technical deep dive

How AI was used

ChatGPT was used for code refinement, debugging help, UI/UX suggestions, and documentation support.

Resolved and implemented

- Cleaner layout and navigation
-
- Better JavaScript organization
-
- Stronger validation and UX feedback

Future work / not yet implemented

- Real backend for contact form
-
- More project case studies
-
- Animations and richer media assets

Outcomes and next steps

Conclusion

- The final result is a complete portfolio web application that combines design, interactivity, and documentation.
-
- It is ready to be pushed to a public GitHub repository and deployed using GitHub Pages.
-
- Future improvements include a working backend, more content, and continuous portfolio updates.

Submission checklist

Repository • deployment • README • AI report • technical documentation • slides/video
